ETIDHI OFFERING · POWERED BY KOGO

Spot Shortages Early.

A late delivery or a sudden rise in use. Agents spot it early, show how many days of stock you have left, and execute approved decisions.

01

Just in time, every time

Too early
Cash tied up and batches expire on the shelf
-$ Cash tied up

Just in time
The right stock at the right moment
✓ Ready when needed

Too late
Wards run short of what patients need
$ Rush orders

02

From warning to recovery

Spot
An agent picks up a problem

Check
Against your stock, daily use, and open orders

Measure
Cost, how long stock lasts, and how long recovery takes

Execute
Once approved, the agent raises the purchase order and sends it to the vendor

Resolve
Tracked until the stock is received and the incident is closed

03

What it watches

Late deliveries and rising use
Delays from vendors and sudden jumps in demand

Low stock
Items running below their reorder level

Dead stock
Items that have not moved and are tying up cash

Expired and near-expiry stock
Batches flagged before they go to waste

EXAMPLE INCIDENT

Supplier delay: surgical gloves

Main vendor delivery delayed. Use is up this week.

Stock lasts	4 days
Next refill due	9 days

A 5-day gap to close

- ✓ Place a stop-gap order with a second vendor — RECOMMENDED
- Move stock from another hospital in the group — BACK-UP

Approve and send order | Ask the agent

Illustrative example.

Built for trust. People decide → AI executes.

No invented numbers
Every figure comes from your data or is marked as an assumption

You approve
Nothing that matters runs without a person's approval

Ask the agent, then let it act
It explains the incident. Once you approve, it raises the purchase order and sends it

BUILT FOR Pharmacy and stores · Procurement · Hospital administrators · Hospital groups
