ETIDHI OFFERING · POWERED BY KOGO

Know Before the Line Stops.

A supplier delay or a machine breakdown. Agents spot it early, check it against your stock and orders, show the cost, and execute approved decisions.

01

Just in time, every time

Too early
Unused stock ties up cash
-$ Cash tied up

Just in time
The right stock at the right moment
✓ On time

Too late
One missing part stops the line
$ Sales missed

02

From warning to recovery

Spot
An agent picks up a problem

Check
Against your stock, parts lists, and open orders

Measure
Cost, how long stock lasts, and how long recovery takes

Execute
Once approved, the agent raises the purchase order and sends it to the supplier

Resolve
Tracked until the parts arrive and the line is safe

03

Factors causing delay

Supplier delays
Late or short deliveries, including dock and transport strikes

Machine breakdowns
A stopped machine and the orders it puts at risk

Weather and transport
Floods, road closures, and transport disruption

Power and labour
Power cuts and labour shortages

EXAMPLE INCIDENT

Supplier delay: brake modules for Line 2

A dock strike has held the supplier's shipment.

Parts last	3 days
Next shipment	9 days

A 6-day gap to close

- ✓ Place a stop-gap order with a second supplier — RECOMMENDED
- Move parts from another plant — BACK-UP

Approve and send order | Ask the agent

Illustrative example.

Built for trust. People decide → AI executes.

No invented numbers
Every figure comes from your data or is marked as an assumption

You approve
Nothing that matters runs without a person's approval

Ask the agent, then let it act
It explains the incident. Once you approve, it raises the purchase order and sends it

BUILT FOR Plant heads · Supply chain and planning · Procurement · Operations leadership
