ETIDHI OFFERING · POWERED BY KOGO

It Sees. It Alerts. It Escalates.

Sentinel watches every camera, drone, and sensor feed at your site. When something is wrong, it alerts the right person at once, explains why, and keeps escalating until someone acts.

01

What it catches

Vehicles at the gate
Reads number plates and checks them against authorised vehicles and gate passes

Unloading bays
Times how long each vehicle stays at the bay and flags overstays

Restricted areas
Flags anyone in a restricted area outside their authorised hours

Loitering
Flags anyone lingering at a fence, door, or gate, and for how long

Fire and other incidents
Spots fire and other incidents as they start

Threat score
Ranks every finding, so the biggest risks reach your team first

02

What happens next

Detect
A camera, drone, or sensor picks it up

›

Alert
An instant alert reaches the person on duty

›

Escalate
No response? It moves up the call tree

›

Close
Logged with the evidence and a written summary

03

Escalation matrix

Instantly	1 hour	2 hours	8 hours	24 hours
Guard on duty	Security head	Site manager	Operations head	CEO

You set the levels, the people, and the timings. Calls and messages go out at each level until someone responds.

Ask the agent why

"Why was this truck flagged?"

> "It has no gate pass for today, and it has been at Bay 3 for 47 minutes. The limit is 30."

"What should I do?"

> "Hold the truck at the bay and call the shift supervisor. I have already alerted security."

Private by design. Governed by default. Yours.

BUILT FOR Security heads · Site and facility managers · Control rooms · Warehouses and plants

Illustrative conversation.
